RADBURG
NEW GENERATION

Tire Direct 
La nueva generación

RADBURG is the result of over 20 years of activity of our company, the only national and top foreign manufacturer involved in tire reconstruction. This aspect is all the more important because our entire production is based on extremely well-founded procedures and on a quality tracking process developed over time.

Our company has enjoyed an intense and rapid technological and commercial development, so that it has become an important exporter to various foreign markets like:

- Europe
- Latin America
- Central and North America

As a manufacturer, the company has integrated the quality monitoring process through a state-of-the-art computer application. Constantly appealing to the most advanced technology but also to the experience gained in the years of activity in the field of tire reconstruction, our specialists have reached the performance of being able to offer to tire market a standard in quality similar to new tires but with a lower price.

How do we do this?

The answer lies in the commitment to quality that we have mastered and that is found in every tire produced. Consequently, we can provide you with retreaded tires because:

- the materials used to make the tires are of the best quality, being used by the top manufacturers worldwide;
- we use a technology that gives us the possibility to obtain the highest performances in terms of quality;
- Our specialists have significant experience in this industry.
